## Computer and electronic product manufacturing

**334110** Computer and peripheral equipment manufacturing

*This Canadian industry comprises establishments primarily engaged in manufacturing computers and computer peripheral equipment.*

*Computers can be digital, analogue or hybrid. Digital computers, the most common type, are devices that can do all of the following: (1) store the processing program or programs and the data immediately necessary for the execution of the program; (2) be freely programmed in accordance with the requirements of the user; (3) perform arithmetical computations specified by the user; and (4) execute, without human intervention, a processing program that requires the computer to modify its execution, by logical decision, during the processing run. Analogue computers are capable of simulating mathematical models and comprise, at least, analogue, control and programming elements.*

*Peripherals are assemblies of components that are self-contained, but designed for use with computers. For purposes of classification, a peripheral must consist of more than a loaded circuit board.
